- 720p 15fps

Sets the resolution and framerate
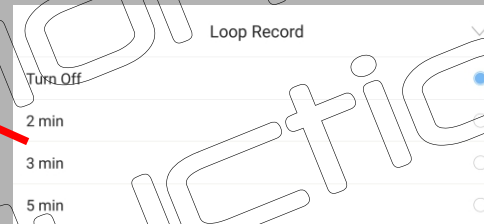

Records sequences of x minutes each. Off for continuous recording

Takes an image every x seconds and assembles them into a continuous movie

This functions allows you to create a timelapse sequence

Sound recording on/off
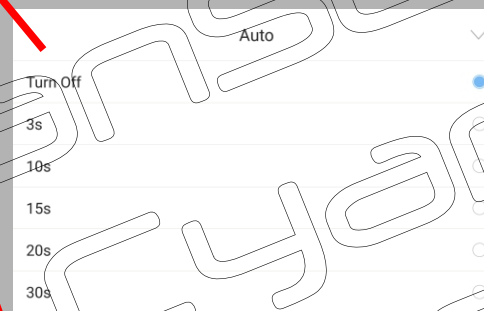

Foxshot camera settings
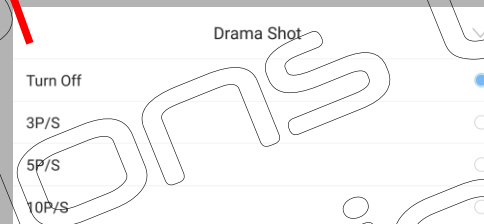

Photo parameters

The resolution of the captured photo

Delay in seconds before the photo is taken

When the photo shot is activated, the camera takes every x seconds a photo until you tap again on the icon to stop the shooting
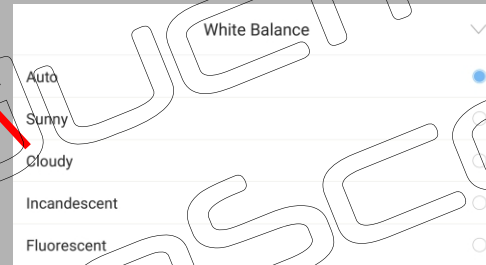

Saves x consecutive photos

Foxshot camera settings
General parameters 1

Settings screen (Camera parameters):
- Exposure Compensation EV — 0
- White Balance — Auto
- Image rotation (toggle on)
- Light source frequency — Auto
- LED indicator light (toggle on)
- WIFI Settings
- Time Synchronization
- File Watermark (toggle on)

Device parameters
- Format
- Factory Reset

Bottom navigation: Shoot | Media Gallery | Settings

Set the exposure from -3 to 3
(-3 = darker, +3 = lighter)
0 = normal

Set the White Balance depending light conditions

On/Off : rotates the image 180°

Depending your location and voltage frequency
Best choice = auto

Foxshot camera settings
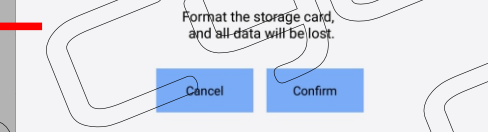

General parameters 2

Here you can define the SSID as well as your own password. Default password is '12345678' and not '66666666'

Tapping this parameter sets the correct time

Display or hide the time stamp

Format the SD card

Resets the camera to its original settings

Memory usage

Tap 'Quit' to save the values and exit the app. I nevertheless suggest to tap on the 'Shoot' icon to return to the main window
