

Specifications

With only 444 gr, controller and clamps included, the Arris Lander-X3 is 140 gr lighter than the 2013 Arris. The height and wheelbase have also increased, which allows more space to integrate a large gimbal.

Thus, the landing skid allows a higher ground clearance (approx. 5-6 cm). For now you can buy the landing skid for \$ 175, at Hobby-Wing, the price includes a 5% discount.

Hints

Do not forget to tighten the screws of the skid at the end of the installation and also tighten the top screws of the servo units.
